

most young educated Nigerians. But it is beginning to lose some of its glamour. Increasing numbers of students are taking arts, science, engineering and professional subjects.

British, but how northbound for organizational rather than political reasons. It was founded by Ladigo Solanke, a Nigerian leader who prepared for the medical schools where so many of Nigeria's leaders were prepared for the responsibilities of independence.

the British universities, polytechnics and medical schools where so many of Nigeria's leaders were prepared for the responsibilities of independence.

colouration by having a pale back and black belly. Both the large savannah and the smaller forest elephants occur and both are hunted for their ivory.

paper, greenshank, curlew are all there; the pied kingfisher, hovering with fluttering wings before his rapid dive; and probably the dapper little crocodile bird whose tooth-picking activities so land situation gets any more difficult than it already is, and to keep those sanctuaries inviolate by an adequate and properly trained staff backed by active government support and sufficient funds.

WHESSEO IN NIGERIA

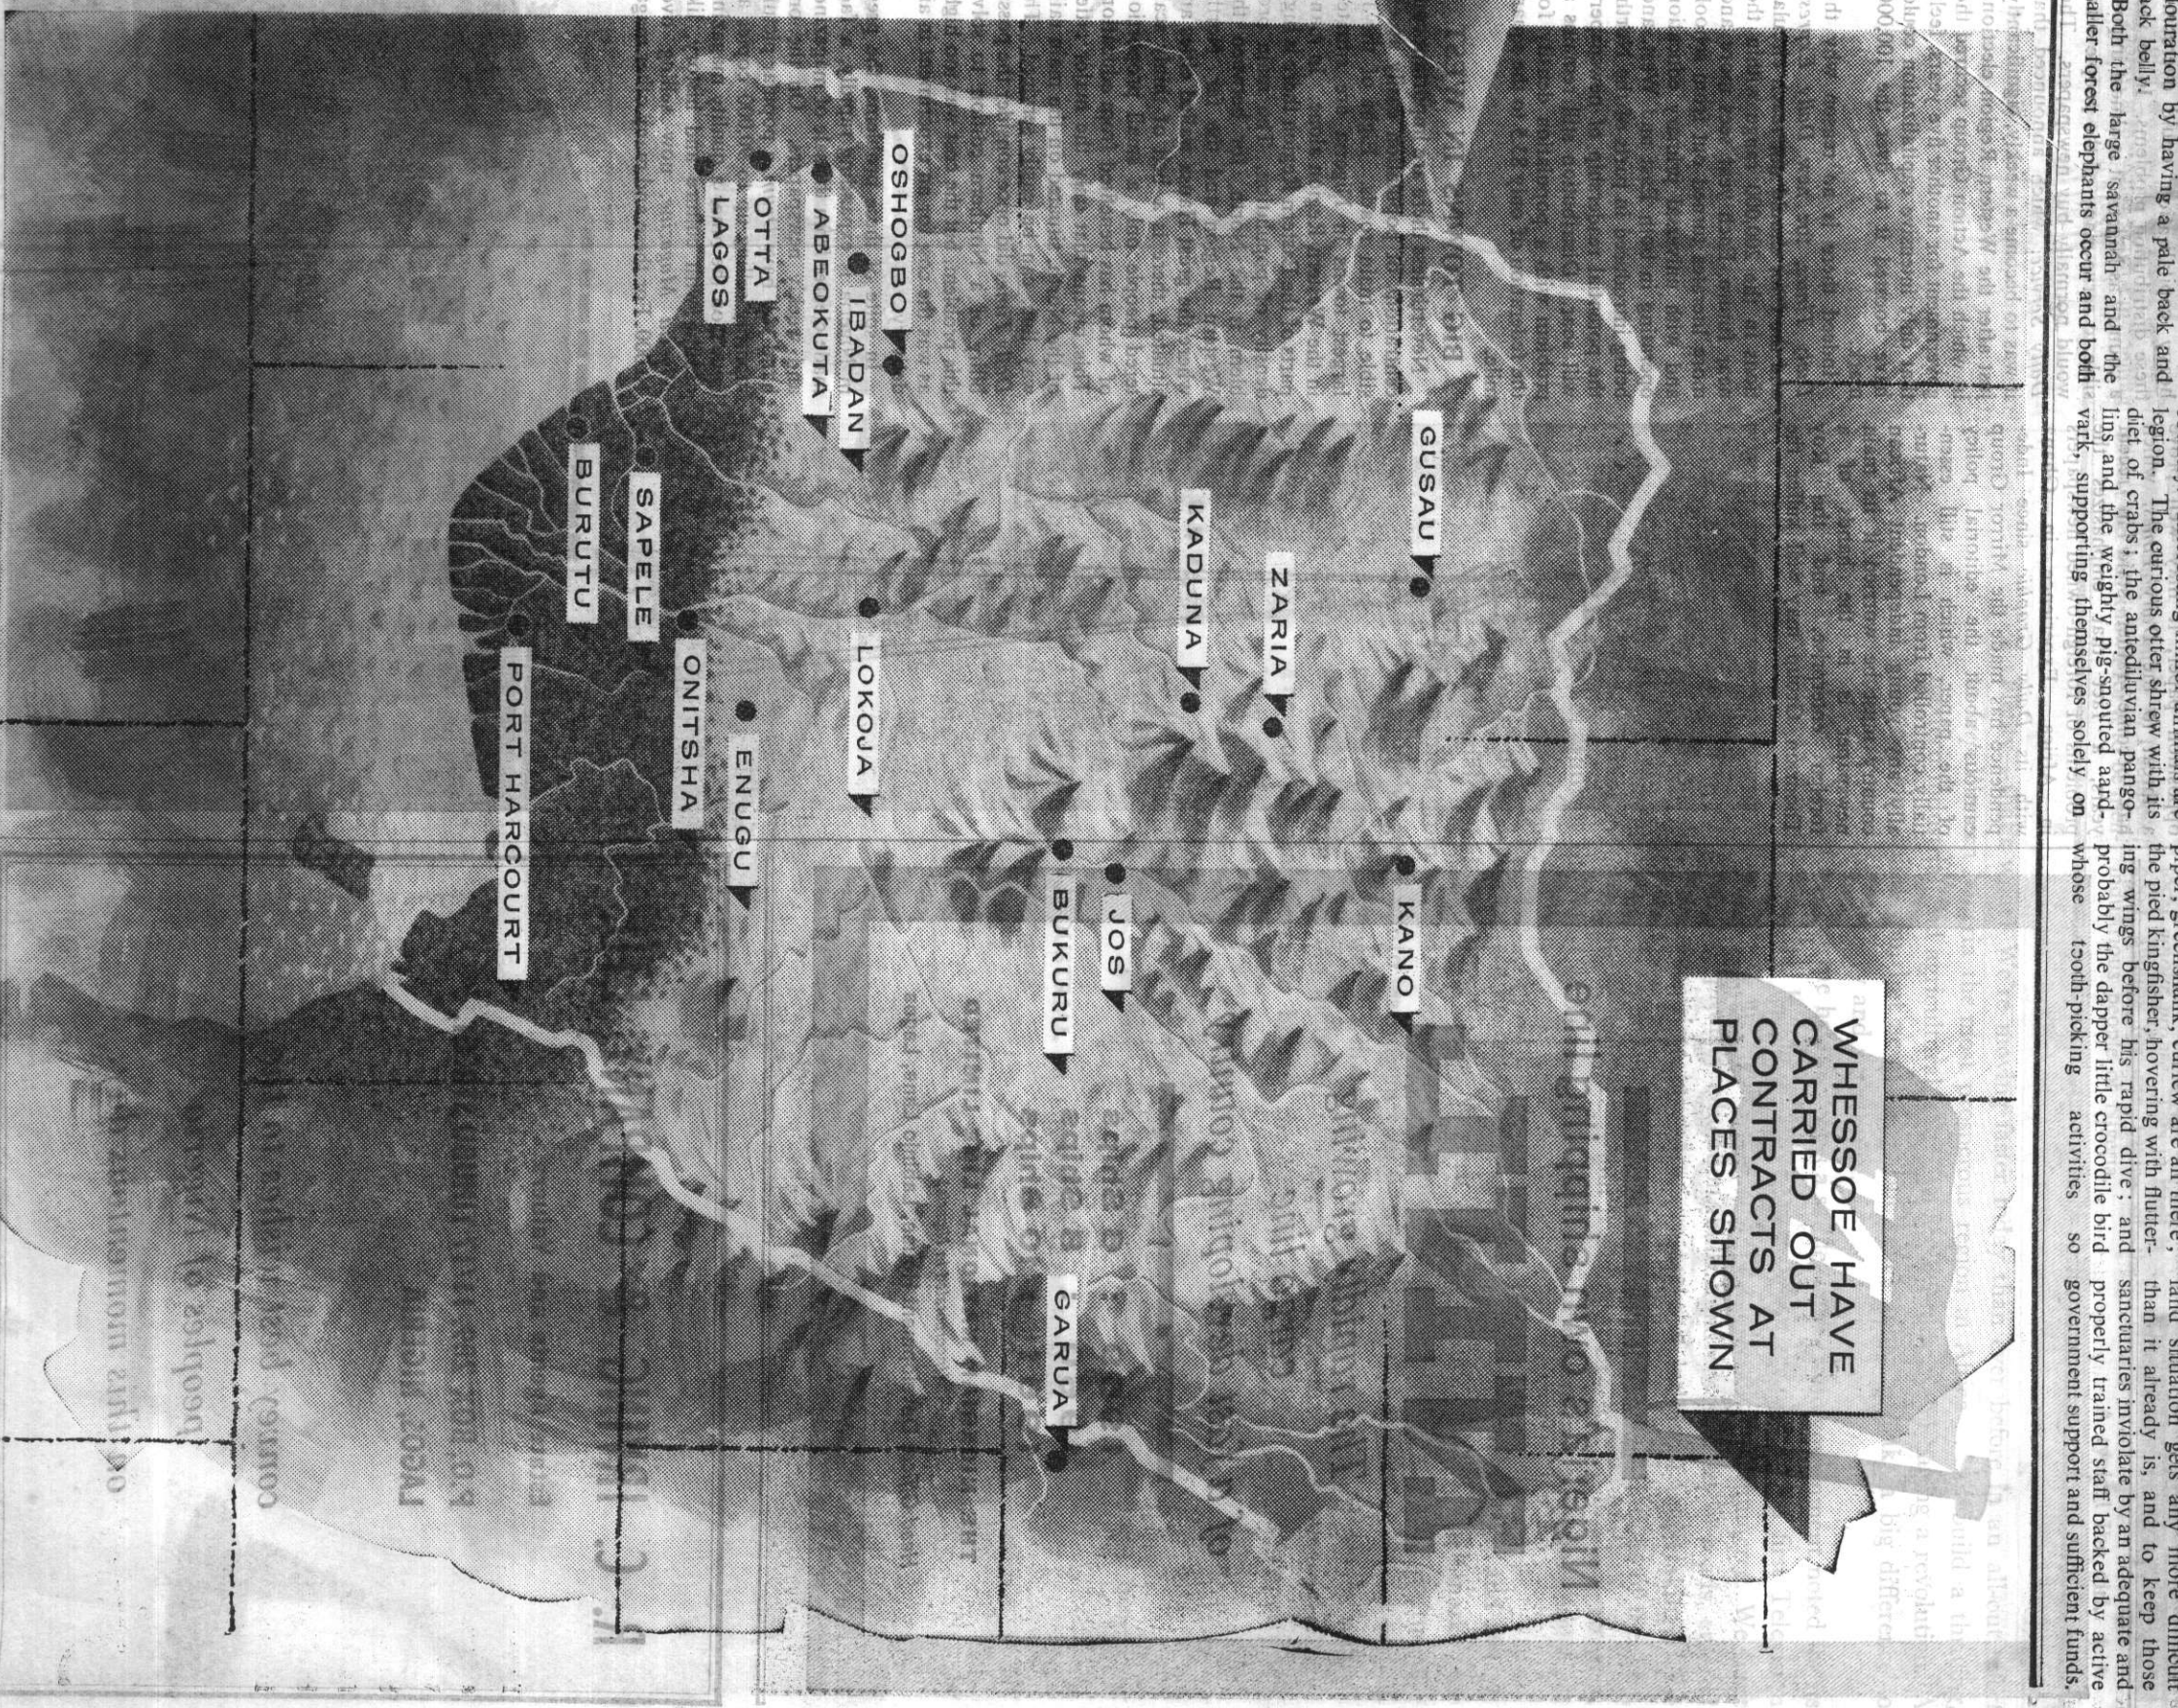

Whesseo's trading association with Nigeria spans nearly forty years, a period that we look back on with great satisfaction. We are delighted, therefore, to be among the first to congratulate the country on its new independent status.

Since 1950 we have built 106 tanks for the storage of petroleum products in widely separated parts of Nigeria: these tanks represent some 6,000 tons of steel and have a combined storage capacity of 51,000,000 gallons. In addition we have provided storage for ground nut oil and palm oil, for fuel at power stations, railway depots and factories and for water in elevated tanks at Lagos and Apapa.

We shall share in the future prosperity of Nigeria through our new associated Whesseo Company now being formed to operate in Port Harcourt. This company will continue the policy of employing Nigerians on an increasing scale: the factory will produce storage tanks, plate work, fabricated pipe work: a machine shop will be installed. The great experience of the parent company in Darlington will be fed in to the new company which will be known as
